TECHNICAL SPECIFICATIONS

MULTI-PLATFORM PROCESSING

- Single unified platform supports Android devices, iPhones, and iPads across all major mobile platforms
- Streamlined processing eliminates the need for multiple solutions or specialized equipment for different mobile platforms

KEY HARDWARE DETECTION

- Automatically detects and reports on key hardware details, including vendor, model, serial number, IMEI, and internal storage capacity
- This essential data provides a foundation for your auditing, grading, and asset management processes
- Use the "Extra Fields" feature to manually add your own data points like cosmetic condition or customer information to each report

EFFICIENT & AUTOMATED WORKFLOWS

- Process multiple devices simultaneously to maximize throughput
- iOS firmware is automatically downloaded and cached locally, significantly speeding up the erasure of subsequent devices of the same model
- Organize your physical workspace by mapping specific USB ports to a fixed grid on the screen, simplifying batch processing

DATA MANAGEMENT & AUDITING

- Complete data sanitization across all supported platforms is performed in accordance with NIST and IEEE guidance
- Comprehensive logging and reporting provide full visibility and complete audit trails for compliance needs
- Centralized data handling via the Ziperase Command Center maintains complete records for all mobile device erasures

INTEGRATION & REPORTING

- Connect to the Ziperase Command Center for centralized mobile device processing and reporting
- Customize reports with specific data fields for customer names, job numbers, or other business-specific data
- Final reports are generated in both PDF and JSON formats, allowing for easy certification and integration with your ERP systems
